

2. Match the item Match the description of the evidence that the Earth is spherical in **List A** with the corresponding correct item in **List B** by writing a correct response below the item number in the table provided.

List A	List B
(i) The flag, smoke and chimney will be seen first before the whole boat.	A. Lunar eclipse
(ii) Returning to the same point after going around the world.	B. Earth's curved horizon
(iii) Taken by satellite from the air showing that the earth is curved.	C. Circumnavigation of the Earth
(iv) A place where the sky and the land appear to meet and look circular from a high altitude.	D. Ship visibility
(v) The whole world will have day and night at the same time if the earth was flat	E. Changing position of polar star
	F. Sunrise and sunset
	G. Aerial photographs

i	ii	iii	iv	v

Section B (70 marks)

Answer **all** questions in this section

3. Vegetation plays a crucial role in supporting human life in a variety of ways such as in environmental, economic, social and health aspects. As form one student who learnt about vegetation. Briefly explain five (5) significances of vegetation to human life.
- (i) _____
- (ii) _____
- (iii) _____
- (iv) _____
- (v) _____
4. Draw a diagram of ocean floor and label fives important features

5. (a) What is weathering?

(b) Mention three types of weathering

(i) _____

(ii) _____

(iii) _____

(c)Mention five (5) significant of weathering

(i) _____

(ii) _____

(iii) _____

(iv) _____

(v) _____

6. a) What is rock

(B) Mention three types of rocks

(i) _____

(ii) _____

(iii) _____

(c) Outline five (5) characteristics of igneous rock

(i) _____

(ii) _____

(iii) _____

(iv) _____

(v) _____

7. A geography teacher encourages students to choose geography as the first subject of study for their life. Explain five (5) reasons why they should study geography

(i) _____

(ii) _____

(iii) _____

(iv) _____

(v) _____

8. Fill the gaps

(i) _____ is the sudden earth movement or vibration of earth crust which cause rapid displacement of crustal rocks

(ii) _____ is the process which involves the fracturing of the crustal rocks due to tectonic forces to form fault

(iii) _____ is the bending or wrinkling of the earth crust producing upward fold and downward fold

(iv) _____ is the movement of molten magma toward or on the earth's surface

(v) _____ is the thin layer of gases held on the earth by gravitation attraction

(vi) _____ is the rock that formed by cooling and solidification of molten material

(vii) _____ is the relationship in which rocks tends to change from one type of rock to another over period of time?

(viii) _____ is the zone which contain crust, mantle and core

(ix) _____ is large crater (large rounded depression) formed when the upper part of a volcano is either bombarded away by violent eruption into the crust or in the volcanic core

(x) _____ is a wall of rock which cut across the bedding plane of country rock.

9. Juma was inside the house where he observes shaking of the earth's crust due to the vibration of the earth's surface cause by natural force operating beneath the earth's surface

a) What is hazard experienced by Juma _____

b) What is the instrument used to measure the hazard? _____

c) Briefly explain (3) causes of that hazard named in (a) above

(i)- _____

(ii) _____

(iii) _____

d) Describe four (4) effects of the hazard in (a) above

(i) _____

(ii) _____

(iii) _____

(iv) _____

Section C (15 marks)

Answer **only** one (1) question

10. The earth has two types of movements. Explain five outcomes of spinning of earth on its axis.

[illegible]
